PROJECTS

Restaurant Food ordering App

(Xcode, Swift, Core Data)

- Created a mobile application that allows customers browse the restaurant's menu, customize their orders, and as well as making reservations with a few taps on their phone. The mobile app offers a convenient way to place an order as they can skip the line and save time.

Student Advising Database - School Project

(HTML, CSS, MySQL, PHP, and Javascript)

- Lead a team of students to create a digital student completion progress application for school advisors to use which allows a simpler process in accessing and managing students' academic status. This software provides a secured portal that has modifiable course tables incorporated with attributes that include completion status, terms completed, grade, planned term, and comments.
